

Excel Excellence

Business Needs:

Aon has an app for their clients that is coded to produce a report based on complex scenarios outlined in over 170 pages of requirements documents.

Aon needed a way to efficiently verify the accuracy of the calculations in all these scenarios.

Manually checking calculations is time-consuming and prone to errors.

Project and Our Approach:

Aspiritech designed an Excel spreadsheet using advanced formulas to:

- verify the calculations from Aon's app
- compare and match results

Results:

Analysts can enter user data covering any scenario, and the results are organized on a single sheet.

This solution makes comparing results from the spreadsheet to Aon's report quick and efficient.

"I'm blown away. Aspiritech did a phenomenal job interpreting pension plan provisions and supporting the coder and team throughout the system testing process."

-Venus Jackson, a leader in Aon's Wealth Solutions
